Description:

The sensor model MoniSpec-C-AD uses the principle of dual channel light absorption to detect colour in liquids. The transmitter model C or C1 is required to use this sensor. The system has been designed for continuous operation with long life time. The difference between measurement and reference channel ($[\text{colour} + \text{turbidity}] - \text{turbidity} = \text{colour}$) provides the colour signal. The sensor can be installed into almost any type of pipe. Process connection, gasket material, etc. will be selected application specific. Optional cleaning jets will allow a cleaning of the sapphire windows in determined intervals. Calibration can be done in multiple ranges and measurement units like Hazen, APHA, ASTM, ppm, etc.. Due to the availability of multiple optical path lengths (2mm up to 500mm) the sensor allows measurement ranges of approximately 0 - 20Hazen up to 0 - 50000Hazen acc. APHA.

Applications:

- Product colour
- Hazen colour according APHA
- ASTM 1500 colour & Saybolt Colour
- Lovibond colour & EBC colour

Operational areas:

- Chemical industry
- Petrochemical industry
- Water & vegetable oil
- Brew & Beverage
